Assignment 2 Draft Feedback Changes

The provided feedback for my draft was:
The commands are working as expected. Good work with the ReadMe file. Implementation details seems to be fine and some work still needs to be done as mentioned in the ReadMe file. A bit more work needs to be done on the testing part. Please refer to the testing for assignment 2 announcement on MyUni incase you need ideas.

At the point of submitting the draft, I hadn't yet implemented the majority of my automated testing. This has now been implemented (see *AutomatedTests.java* for the code and the README file for a thorough description).

In addition to the automated testing, I cleaned up a lot of code, refactored out long methods, made the retry logic for ContentServer and GETClient more robust, and updated the AggregationServer to refresh data when a GET /weatherdata request is made, so data is correct before responding. These things weren't specifically in response to draft feedback, but they weren't present yet in that specific submission.
